presented in conjunction with the

2014 Washington State Governor's Industrial Safety and Health Conference

PURPOSE

Accidents happen, but they do not happen by chance. Systematic evaluations and understanding of the root causes of accidents can prevent future incidents. This course will cover the basic accident investigation procedures and accident analysis techniques. Participants will receive a certificate of completion for OSHA #7505 from the Pacific Northwest OSHA Education Center.

LEARNING OBJECTIVES

- Identify basic accident investigation concepts
- Describe the characteristics of an effective accident investigation program
- Describe the six steps in an accident investigation
- Outline the requirements for accident reporting
- List the roles and responsibilities of players in an accident investigation
- Describe the Fatality Assessment & Control Evaluation program
